CAREER GROWTH ACADEMY Platform

Web Backend & Mobile App Workflow

Backend stays inside Next.js, so the website also serves as the backend for the future mobile app.

Phase	Focus	Goal	Stages & Charges
Phase 0 (Completed)	**Interactive Frontend Prototype (Completed)**	Fully functioning, high-fidelity UI prototype that simulates the entire platform without a real database.	**5 steps** **₹ 4000/-**
Phase 1	**Backend Development**	Next.js + Prisma + PostgreSQL powers the website and the future mobile app.	**4 steps** **₹ 6000/-**
Phase 2	**Mobile App Development**	Build the UI and fetch data from the Phase 1 APIs; ship to the stores.	**5 steps** **₹ 5000/-**

PHASE 0 | Interactive Frontend Prototype Completed (Interface)

Current state: a working UI prototype that needs no real database yet (excluding subscription)

#	Step	What To Do	Tools / Commands	Charges
0.1	**UI/UX Framework**	• Built a responsive, modern Next.js application. • Styled the whole interface with Tailwind CSS.	Next.js Tailwind CSS	₹ 1200 / hr
0.2	**Three-Tier Architecture**	• Developed distinct interfaces for the Public Website, the Student Portal, and the Admin Portal.	Public Website Student Portal Admin Portal	₹ 500 / hr
0.3	**Simulated Authentication**	• Implemented role-based login (Student vs. Admin). • Protected private routes based on the logged-in role.	Role-based login Protected routes	₹ 300/ hr

0.4	**Simulated Database**	• Created a data layer that uses browser localStorage plus seed data.
		• Interactions persist across the browser session without a real database.
			`cgaService.ts`
			`localStorage`
			Seed data
				₹ 1500 / hr

0.5	**Core Workflows Modeled**	• Public: course browsing, filtering, and simulated fee payments. • Student: dashboard with study material access (PDF reader) and a timed Mock Test Arena. • Admin CMS: manage students, open/close batches, view fee receipts, and edit public website content live.	PDF reader Mock Test Arena Admin CMS	₹ 500 / hr

Charges for Phase 0 : ₹ 4000/-

PHASE 1 | Backend Development (Brain)

Next.js + Prisma + PostgreSQL + including all subscription (paid)

#	Step	What To Do	Tools / Commands	Pay / Hour

1.1	**Setup Database & Prisma**	• Create a PostgreSQL database (Neon.tech or Supabase).
		• Copy the connection URL into a .env file as DATABASE_URL="your-postgres-url".
		• prisma/schema.prisma is already generated from your seed data.
		• Run the migration command to create all tables in PostgreSQL.
			Neon.tech / Supabase
			`.env`
			`npx prisma db push`
				₹ 1500/ hr

1.2	**Seed the Database**	• Write a short script using the Prisma Client. • Read all dummy data from src/data/initialSeedData.ts. • Bulk-insert it into the new PostgreSQL database.	Prisma Client `src/data/initialSeedData.ts`	₹ 1500 / hr

1.3	**Build API Routes**	• Create an api directory inside src/app.
		• Build REST endpoints: auth/login (check credentials, return token), courses (course list), students/[id] (student profile).
		• Secure all routes with token-based authentication.
			Next.js Route Handlers
			NextAuth.js or Jose (JWT)
			`src/app/api/auth/login/route.ts`
			`src/app/api/courses/route.ts`
			`src/app/api/students/[id]/route.ts`
				₹ 1500 / hr

1.4	**Connect Web Frontend**	• Open src/services/cgaService.ts. • Delete all code that saves to localStorage. • Rewrite the functions to call the new /api/... endpoints. • Result: the web app is production-ready and database-driven.	fetch() or axios `src/services/cgaService.ts`	₹ 1500 / hr

Charges for Phase 1 : ₹ 6000/- (major)

PHASE 2 | Mobile App Development

Backend APIs are live; now build the UI and fetch data (including subscription)

#	Step	What To Do	Tools / Commands	Pay / Hour
2.1	**Initialize Mobile Project**	• Create a new project outside the Next.js repository. • React Native (Expo) is recommended since you already know React; Flutter is the alternative.	React Native `npx create-expo-app cga-mobile-app`	₹ 500 / hr
2.2	**Build Mobile UI/UX**	• Recreate Student Portal screens: Dashboard, My Courses, Mock Tests, Fees. • Use brand colors (Royal Academic Blue and White) for consistency with the website.	React Native components Brand palette: Blue & White	₹ 1500/ hr
2.3	**Connect App to Next.js APIs**	• Call the exact same endpoints built in Phase 1. • Example: student login sends a request to https://your-website.com/api/auth/login.	axios or fetch `/api/auth/login`	₹ 1000 / hr
2.4	**App-Specific Features**	• Push Notifications: integrate FCM so the admin can send instant alerts (e.g. "Batch timing changed"). • PDF Viewer: add a native PDF viewer so students can read study materials securely.	Firebase Cloud Messaging (FCM) Native PDF viewer component	₹ 500 / hr

2.5	**Testing & Store Deployment**	• Test on real Android and iOS devices.
		• Build production bundles: .aab (Android) and .ipa (iOS). (depending upon the domain)
		• Publish to Google Play Store and Apple App Store. (if domains are there)
			Expo Go
			`.aab (Android)`
			`.ipa (iOS)`
				₹ 1500 / hr

Charges for Phase 2 : ₹ 5000/-
